nutrient claims are not a guaranteed analysis.*

PRODUCT INFORMATION:

Nutri-Mulch is a superior mulch for improving any landscape. Manufactured from aged native Maine bark and **earthlife™** compost, its dark color and rich texture are ideal for perennials, ornamentals, and around trees and shrubs. Nutri-Mulch is nutrient stabilized with compost so the bark no longer competes with plants for nutrients. Unlike conventional mulches, there is no need to remove Nutri-Mulch prior to the next application, simply rake into soil and re-mulch.

USE RECOMMENDATIONS:

Landscape Mulch: Apply an even layer approximately 2-3" deep. When applied at this average thickness, 1 cubic yard of mulch will cover approximately 100 square feet. Like any mulch, it should be applied up to, but not touching the stems or stalks of plantings. For additional weed suppression, apply landscape fabric prior to mulching.

COMPOST INFORMATION:

- Compost Technology:** In vessel Tunnel System using Gicom B.V. technology
- Feed Stocks:** Sawdust, woodchips & municipal biosolids.
- Classifications:** US EPA Class A, exceptional quality compost. Approved for use in ME, NH, MA, VT and CT.
- Services/Support:** On site technical assistance regarding blending ratios, application methods and seeding recommendations. Additional analyses & specifications available.

BEST PRACTICES:

Proper soil and subsoil drainage should be assured prior to determining compost, fertilizer and lime application rates. Compost application rates and soil amendment requirements are influenced by plant selection, soil/media quality, site characteristics, compost attributes and other factors. Have your soil and soil/compost blend tested by a reputable laboratory and review your test results with a trained agricultural/soil professional.
